A NIHR Midlands PSRC Dataset Of Older Patients With Diabetic Emergencies

Data range for infographic: 01.01.2000-02.02.2022

Other extended time periods are available on request

An NIHR Midlands Patient Safety Research Centre dataset of 366,035 diabetic emergencies and acute admissions associated with diabetes in older adults including demographic data with investigations, serial physiology and outcomes.

Demographic

Mortality by comorbidity

Comorbidities

Top 5 diabetic complications in patient spells:

- 332K Non-insulin-dependent Diabetes Mellitus
- 269K Essential (primary) Hypertension
- 74K Chronic Kidney Disease
- 61K Chronic Ischaemic Heart Disease
- 30K Congestive Heart Failure

Other diagnoses are available

33M

Laboratory Test

- 3M blood glucose test recorded
 - 31K HbA1c tests completed
- Other blood details are available.

1.8M

83K

Subcut
Injection

28K

IV Injection

Medication

- 32K Rapid Acting Insulin; Lispro, Aspart and Glulisine
- 30K Long Acting Insulin; Glargine, Detemir and Degludec

Inpatient care

- 367,803 Hospitalised spells; containing 83,303 unique diabetic patients
- 2M days worth of hospital data with an average in-hospital length of stay of 6 days
- 237K X-Rays and 75K CT Scans with other imaging and investigation available
- 27% of the population are from most deprived areas and 7% of patients are from least deprived areas

Type of Diabetes

- 23% Type 1 diabetic
- 76% Type 2 diabetic
- 1% Other specified diabetes

Referrals
